PASQUALE VASATURO

18 MILLER STREET

MEDFIELD, MASSACHUSETTS

CONNIE OLIVA

(Description on Page 5)

GREETINGS:

Once again it is both a pleasure and privilege to present my annual price list, and once again it is my pleasant duty to thank you for your fine orders last season. — Pasquale Vasaturo.

New 1948 Introductions

MARY DEE

(Vasaturo 1948)

(*Mary Damans* x *Ella May*)

Seedling 38-2-A — A. G. R. No. 376

A new formal white in the medium-sized class. Opens eight creamy-throated white florets on a 20 bud spike, with six more buds in color. Tall vigorous plant.

Mary Dee has the distinction of being the highest scoring seedling (91) during the 1946 NEGS Seedling Show Season.

Mary Dee was also highest scoring seedling at the Massachusetts 1946 Trial Gardens at Waltham Field Station.

Mary Dee is an ideal Florists' Variety, and one that will certainly become very popular.

\$5 Each

Any Size

MARY DEE

New 1948 Introductions

JUNE

(Vasaturo 1948)

(White Phantasy x Brightside)

Seedling 39-12-3

June is another Florists' Variety — white with rose border. Opens up to six medium-sized florets on a straight 18-20 bud spike.

June is stunning in basket work and always excites attention at the Boston Show.

June won her NEGS Spurs in 1944 and again in 1947, and was in the Gold Medal Collection at both 1946 and 1947 Boston Show.

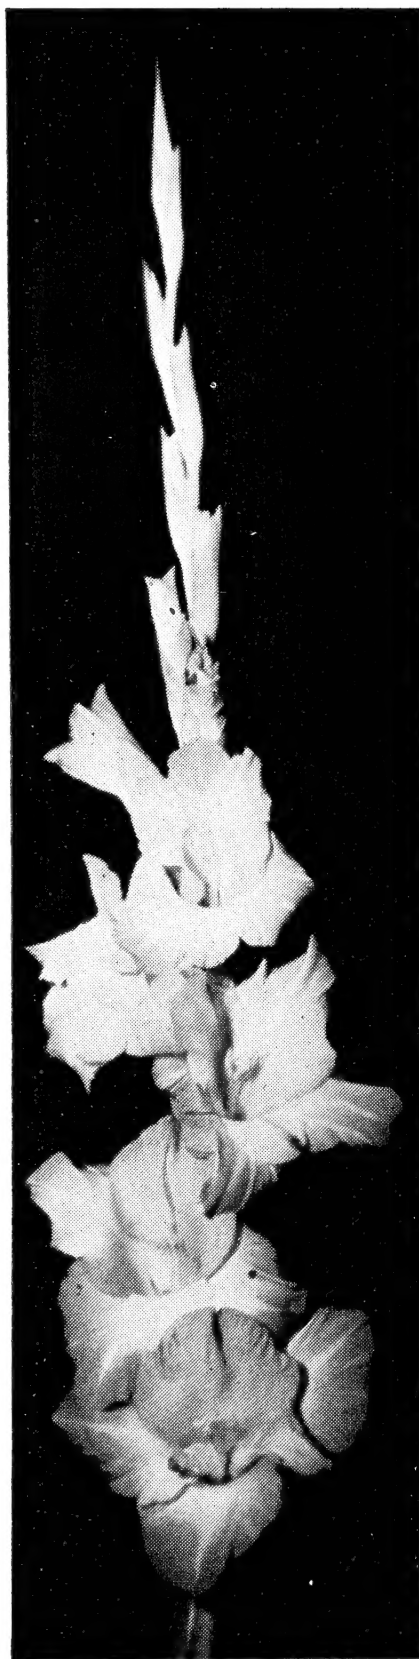

Price is within the reach of all — so try it, and let June come bustin' out all over.

JUNE

New 1948 Introductions

YANKEE CLIPPER

(Drake 1948)

(Sport of Picardy)

Seedling (Drake 33) A. G. R. 433

Yankee Clipper comes well recommended; and after seeing this Picardy Sport at the Rhode Island Show and at the NEGS Seedling Shows this past season, it has my complete endorsement.

Yankee Clipper is a blush-ivory giant, with a pink cast that deepens as the florets age. It has the heaviest fluting and the tightest attachment of any Glad in recent years. Opens up to nine six-inch florets on a 20-22 bud spike. Texture is like leather.

Price is low so everyone can try it. Better get aboard now — same prices next year.

\$3 Any Size

Bbts. \$1 ea.; \$10 doz.; \$75 per C.

YANKEE CLIPPER

New 1948 Introductions

PEGGY ANN

(Vasaturo 1948)

(Ella May x Rosemarie Pfitzer)

Seedling No. 39-23-2

Peggy Ann will delight the smaller-sized Glad lovers! Chic and appealing pink with white throat. Tall graceful spikes bear six butterfly-type florets, 18 buds. A fitting companion to my own Dolores.

Award of Merit 1945 and winner of the Carson Brevort Trophy in 1944.

Price **\$2.00** Each

Any Size

Previous Introductions

NEVA

(Vasaturo 1946)

A large pure white with cream throat, 22 buds and six giant florets in charming informal arrangement. Excellent for basket work — (See cut on front cover.)

ETHEL THERESA

(Vasaturo 1947)

A small informal ruffled cream white with wine feather in throat. Opens five three-inch florets on a 16 bud flowerhead.

Previous Introductions

CONNIE OLIVA

(Vasaturo 1946)

A giant deep rich cream that is fast coming into its own. Tall and vigorous yet graceful with 5-6 giant florets on an 18 bud flowerhead.

CLARA JOANNA

(Vasaturo 1946)

A tall glowing red with white penciling on the lower petals. Rank, vigorous grower. Opens up to six giant florets on a 20 bud spike. Heavy propagator and coming commercial.

ANGELA

(Vasaturo 1947)

Heavily ruffled rich cream with attractive claret throat feather. Opens six triangular florets with six more in color resembling rose-buds. Entirely apart from any other cream in commerce today.

DOLORES

(Vasaturo 1943)

Everyone knows and loves this little pink and white young lady.

ELDA

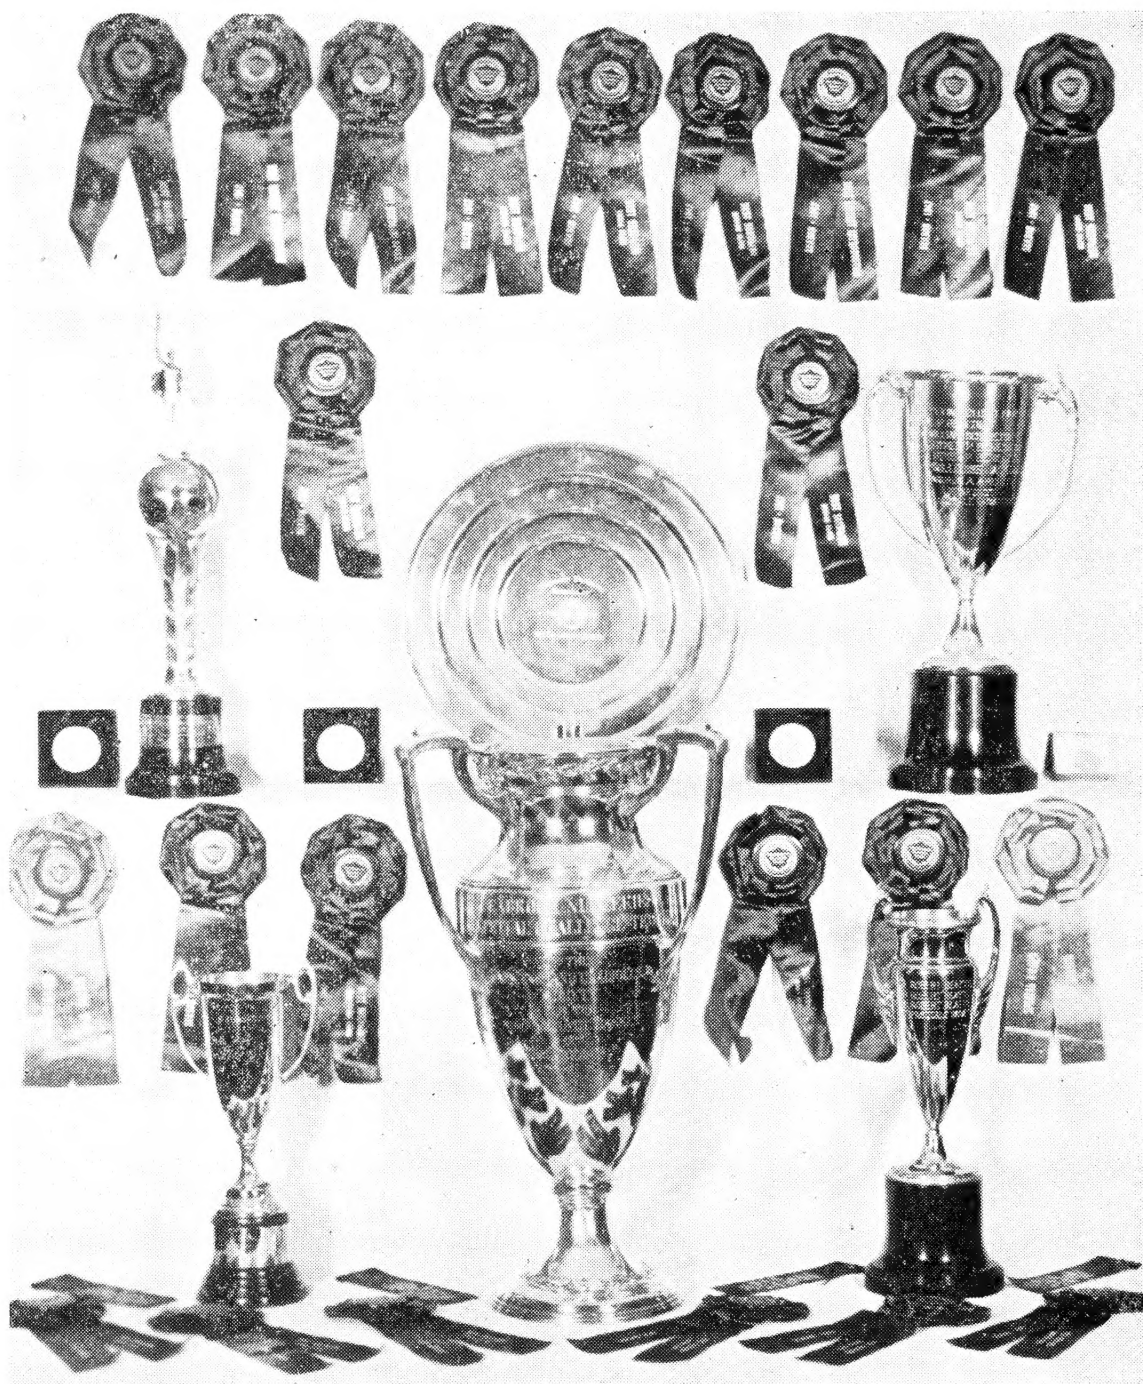

(Vasaturo 1943)

An orange for the small-sized class. Stock scarce.

EVELYN MAY

(Vasaturo 1947)

A tall giant bright red with deeper throat. Plant grows over five feet tall. Twenty buds with 6-7 formal florets on a 26-inch flowerhead. Blooms in 85 days, and from all sizes. See cut on back cover. A good one!

SPECIAL COLLECTION

100 large bulbs of at least 40 varieties (hand-selected from regular named variety storage trays). No better value anywhere. **\$6.00 Postpaid**

Gladiolus Culture in a Nutshell

When bulbs are received, open package and bags at once to admit air and store in cool dry cellar. Correct temperature for bulb storage about 40 degrees fahrenheit.

The proper time to plant is when the ground is somewhat warmed up which is usually about the time trees begin to leaf. Naturally, this condition varies according to the locality, we find we can start bulblets around April 10th, and bulbs a week or so later. The best places to plant bulbs are spots in your garden which get lots of sunlight and away from trees, shrubs, etc., which tend to take all the moisture from the ground.

Gladiolus will grow in any kind of soil, but there must be good drainage. They can take a large amount of moisture but, under no circumstances, will they thrive in continually "wet" spots.

We recommend the "dipping" or "disinfecting" of bulbs prior to planting, regardless of whether they are your own grown stock or new purchases. This is a safe-guard to kill thrips and also any possible disease on the bulbs.

Effective disinfectants which we have used to advantage are Lysol, Bichloride of Mercury or Ceresan. Temperature of the liquid should be around 70 degrees. Treating of bulbs should be done just prior to planting.

Using the Bichloride of Mercury (Corrosive Sublimate) SOAK from 12-16 hours in a solution of one ounce to seven gallons of water. Use only wooden, glass or crockery containers. This is very effective BUT it definitely holds up growth for about a week.

Lysol dip: 1 tablespoon of Lysol to 1 gallon of water, SOAKING the bulbs four to eight hours. We find this very good for both thrips and diseases.

Ceresan: This is a dangerous poison so be careful. Use an ounce of the new improved ceresan to about two gallons of water with an ounce of Spreader added. Mix the spreader and the ceresan thoroughly in a small amount of water first. Bulbs should not be left in this mixture any more than thirty minutes. This treatment particularly good for disease.

If thrips are detected once the plants are well up, two methods are used extensively. Either spraying or dusting. Spraying is a lot of work and we have found that dusting is just as good. 5% D.D.T. powder will do the trick. If you have found this unsatisfactory, then spraying can be done by using either 50% D.D.T. Foliage Spray or Tartar Emetic. If using Tartar Emetic, the proper solution is 3 gallons of water, 4 1/2 teaspoons of Tartar Emetic and 1 cup of brown sugar. If sugar is not available, then use corn syrup or molasses.

Cultivation or stirring of soil is a great factor. This should be done often to keep the soil loose and eliminate all the weeds.

When cutting blooms, do not cut too close to ground. Always leave at least 3 leaves on the plant and more if you can. We ourselves have made it a practice of leaving five and this is much better for the bulbs. Morning is the best time to cut.

After blooming, bulbs mature in four to six weeks and can then be dug. Tops should be cut off close to the bulb and the bulbs spread out in low boxes where air can move around them. Dry as quickly as you can and in about three to four weeks, the old bulb should come off easily. Be sure to burn the old dried out bulbs and roots, do not leave them lying around.

Bulbs should now be in good shape, kept in the proper temperature, until planting time rolls around again.

Caution: Lysol, N. I. Ceresan and Bichloride of Mercury are **POISON**. Handle and store with care.

WHOLESALE LIST

No less than 25 of a Kind and Size at Hundred Rate . Pints of Bbts. at the Quart Rate.
